## Wireless Camera & Tablet App

The groundbreaking AVer TabCam is the world's first video capture and streaming solution for tablets, allowing teachers to stream, present, annotate, record and share live images of real objects in class via an iPad, Android tablet, Windows® 8 tablet, or PC/Mac. The wireless TabCam camera and intuitive, feature-rich TabCam app form a uniquely mobile teaching and learning solution. With TabCam teachers can use any classroom object to create engaging and educational lessons at the spur of the moment. In addition, all content, including annotations and classroom audio, can be recorded and shared via the Web at the touch of a button, making lessons available to students anytime, anywhere.

### Be mobile in the classroom

Present live video of anything, from anywhere in your room, while annotating, highlighting and manipulating the content from your tablet or laptop without being tethered to the camera. Present student or group work from one end of the room with the camera while using the tablet app to interact with the content and another group elsewhere.

### Wireless camera, wireless controls

The inventive design of the TabCam app allows you to quickly focus on a particular region of the screen, zoom in and zoom out using nothing but a few taps and swipes of your finger. Open the camera control menu to access all the camera settings and functions, including freeze, rotate, brightness, contrast and color.

### Annotate, highlight and more

Make notes, add drawings, highlight or insert shapes and text directly over live streaming video. Label the parts of a butterfly or highlight examples from student work without having to stop, capture an image and move it into an editing app, or use the TabCam app's whiteboard mode to work with saved images or on a blank digital canvas.

### Record and share everything

The rich lessons you create with TabCam should not be forgotten after you're finished teaching. TabCam will record your entire lesson to the media library – live video, audio, annotation, highlights, and supporting content. Once you're done recording, upload everything to YouTube, Dropbox, Facebook, Twitter or Picasa for easy sharing and at-home review.

### PC/Mac integration via A+ Suite

Don't have a tablet or just don't feel like using one... no problem! Pair your TabCam camera with any Windows® or Apple computer on the network and run AVer's A+ Suite software to take advantage of recording, annotation and a number of other helpful presentation tools, including a few available only with A+ Suite, like optical character recognition (OCR) and text-to-speech TTS.
